

*In the case of **Iribov**, Invest International provided a term loan for their business in Ghana. The loan proceeds are used for expansion with a laboratory and greenhouses for tissue culture and production. The final products are mainly used for exports.*

The investments will lead to 200 direct jobs of which mainly women. Efficient production will lead to less carbon emissions than previous production. The project will eventually also contribute to regional food security, since it also focuses at seeds for vegetables and fruits.

*In Akwamufie, the **Goodroll Africa** has built a bamboo toilet paper factory. With the sustainable production of paper from bamboo, a lot of trees are saved. In addition, through local production and sales, an substantial amount of (in)direct jobs in the community are generated.*

*During the Covid-19 pandemic, **Delft Imaging** was provided with financing to invest in a corona screening tool. Based on their existing network and technologies the company could rapidly activate the tool and identify covid in Ghanaian hospitals.*

***Kumasi Juice** is turning organic waste into proteins. Kumasi is made from the extraordinary fresh sweet juice from the cocoa fruit. Cocoa fruit juice normally flows away. By making soft drinks from it, Kumasi not only ensures less food waste, but also 30% extra income per kilogram of cocoa for farmers in Ghana and the Ivory Coast.*
